

YAFL

Yet another f... language

Fabian Becker

January 12, 2026

Abstract

This report details the design philosophy and language specifics of the YAFL programming language. It aims to provide a comprehensive overview about the compiler submitted as the final study project of the Compiler Construction course

1 General Overview

YAFL is an abbreviation for "Yet another f... language", the replacement part for f... can be chosen by the user based on her or his current stance towards the language. Possible suggestions are: fabulous, fun or frustrating.

YAFL is a compiled language, as it creates bytecode for a slightly modified version of the provided VM3 virtual machine. Moreover it is a statically typed general purpose language as the included demo programs prove.
